### REC\_DS using C\_Week 7\_COD\_Question 3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

In a messaging application, users maintain a contact list with names and corresponding phone numbers. Develop a program to manage this contact list using a dictionary implemented with hashing.

The program allows users to add contacts, delete contacts, and check if a specific contact exists. Additionally, it provides an option to print the contact list in the order of insertion.

##### ***Input Format***

The first line consists of an integer  $n$ , representing the number of contact pairs to be inserted.

Each of the next  $n$  lines consists of two strings separated by a space: the name of the contact (key) and the corresponding phone number (value).

The last line contains a string *k*, representing the contact to be checked or removed.

### **Output Format**

If the given contact exists in the dictionary:

1. The first line prints "The given key is removed!" after removing it.
2. The next *n* - 1 lines print the updated contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

If the given contact does not exist in the dictionary:

1. The first line prints "The given key is not found!".
2. The next *n* lines print the original contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

Refer to the sample outputs for the formatting specifications.

### **Sample Test Case**

Input: 3

Alice 1234567890

Bob 9876543210

Charlie 4567890123

Bob

Output: The given key is removed!

Key: Alice; Value: 1234567890

Key: Charlie; Value: 4567890123

### **Answer**

```
// You are using GCC
```

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
#include <string.h>
```

```
#define MAX_CONTACTS 50
```

```
#define MAX_NAME_LENGTH 11
#define MAX_PHONE_LENGTH 11
```

```
typedef struct {
    char name[MAX_NAME_LENGTH];
    char phone[MAX_PHONE_LENGTH];
} Contact;
```

```
typedef struct {
    Contact contacts[MAX_CONTACTS];
    int count;
} ContactList;
```

```
void initializeContactList(ContactList *list) {
    list->count = 0; // Initialize the contact list count to 0
}
```

```
int addContact(ContactList *list, const char *name, const char *phone) {
    if (list->count >= MAX_CONTACTS) {
        return -1; // Contact list is full
    }
    strcpy(list->contacts[list->count].name, name);
    strcpy(list->contacts[list->count].phone, phone);
    list->count++;
    return 0; // Success
}
```

```
int removeContact(ContactList *list, const char *name) {
    for (int i = 0; i < list->count; i++) {
        if (strcmp(list->contacts[i].name, name) == 0) {
            // Shift contacts to remove the contact
            for (int j = i; j < list->count - 1; j++) {
                list->contacts[j] = list->contacts[j + 1];
            }
            list->count--; // Decrease the count
            return 1; // Contact removed
        }
    }
    return 0; // Contact not found
}
```

```
void printContactList(ContactList *list) {
```

```
    for (int i = 0; i < list->count; i++) {  
        printf("Key: %s; Value: %s\n", list->contacts[i].name, list->contacts[i].phone);  
    }  
}
```

```
int main() {  
    ContactList contactList;  
    initializeContactList(&contactList);  
  
    int n;  
    scanf("%d", &n);  
    for (int i = 0; i < n; i++) {  
        char name[MAX_NAME_LENGTH], phone[MAX_PHONE_LENGTH];  
        scanf("%s %s", name, phone);  
        addContact(&contactList, name, phone);  
    }  
  
    char key[MAX_NAME_LENGTH];  
    scanf("%s", key);  
  
    if (removeContact(&contactList, key)) {  
        printf("The given key is removed!\n");  
        printContactList(&contactList);  
    } else {  
        printf("The given key is not found!\n");  
        printContactList(&contactList);  
    }  
  
    return 0;  
}
```

**Status :** Correct
