REC_DS using C_Week 2_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -

```
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
Char item;
  struct Node* next;
  struct Node* prev;
};
// Function to insert at end
void insertAtEnd(struct Node** head, char item) {
  struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
  if (!newNode) {
    printf("Memory allocation failed.\n");
     exit(1);
  newNode->item = item;
  newNode->next = NULL
```

```
247507044
       newNode->prev = NULL;
       if (*head == NULL) {
         *head = newNode;
         return;
       }
       struct Node* temp = *head;
       while (temp->next != NULL) {
         temp = temp->next;
       temp->next = newNode;
       newNode->prev = temp;
                                                     247507044
 // Function to display forward
     void displayForward(struct Node* head) {
       struct Node* temp = head;
       while (temp != NULL) {
         printf("%c ", temp->item);
         temp = temp->next;
       }
       printf("\n");
     }
     // Function to display backward
                                                     241501044
     void displayBackward(struct Node* tail) {
    struct Node* temp = tail;
       while (temp != NULL) {^
         printf("%c ", temp->item);
         temp = temp->prev;
       }
       printf("\n");
     // Function to free the memory
     void freePlaylist(struct Node* head) {
temp = head;
head = head;
head = head
       struct Node* temp;
       while (head != NULL) {
                                                     241501044
        head = head->next;
